A;NOte: the authors translated the codon AAA for residue 970 as Leu
C;Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM
C;Comment: Several forms of NCAM are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         R;Krieg, P.A.; Saki

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

TISSUE SPECIFICITY: EXPRESSED IN MAMMARY TISSUE AND SECRETED IN

TISSUE SPECIFICITY: EXPRESSED IN MAMMARY TISSUE AND SECRETED IN

ASSOCIATION WITH THE MILK-FAT-GLOBULE MEMBRANE DURING LACTATION.

SIMILARITY: BELONGS TO THE EMUNOGLOBULIN SUBERFAMILY. CONTAINS 1

V-LIKE DOMAIN. BELONGS TO THE BYNYMOG SUBFAMILY

SIMILARITY: STRONG, TO THE C-TERMINAL OF RET FINGER PROTEIN (RFP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBUNIT: SEEMS TO ASSOCIATE WITH XANTHINE DEHYDROGENASE/OXIDASE

Patent number WO0121796, 29-MAR-2001.

-1- FUNCTION: LIGAND FOR THE T-CELL-SPECIFIC CELL SURFACE RECEPTOR ICOS. ACTS AS A COSTIMULATORY SIGNAL FOR T-CELL PROLIFERATION AND CYTOKINE SECRETION; INDUCES ALSO B-CELL PROLIFERATION AND DIFFERENTIATION INTO PLASMA CELLS. COULD PLAY AN IMPORTANT ROLL MEDIATING LOCAL TISSUE RESPONSES TO INFLAMMATORY CONDITIONS, AN WELL AS IN MODULATING THE SECONDARY IMMUNE RESPONSE BY COSTIMULATING MEMORY T CELL FUNCTION. DURING, PREGNANCY, MAY FUNCTION STEMULATING MEMORY TO CELL FUNCTION. TO SKEW THE CYTOKINE OF MATERNAL T-CELLS TOWARD IMMUNOPROTECTI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                STRAIN-C3H/HeJ; TISSUE-FCCU.

TISSUE SPECIFICITY: ISOFORM 1 HIGHEST EXPRESSION IN LYMPHOID
TISSUES, SUCH AS SPLEEN (MOSTLY IN THE MARCINAL ZONE), LYMPH NOD
(PARTICULARLY IN THE CORTEX AND IN BOTH PRIMARY AND SECONDARY
FOLLICLES), THYMUS (PREDOMINANTLY IN THE MEDULLA) AND PEYER'S
PATCHES (MOSTLY IN THE FOLLICLES), LOWER LEVELS IN MANY
NONLYMPHOID TISSUES, SUCH AS BRAIN, HEART, KIDNEY, LIVER, LUNG,
SKELETAL MUSCLE AND TESTIS. PRESENT ON FRESHLY ISOLATED SPLENIC
CELLS, T-CELLS, DENDRITIC CELLS AND MACROPHAGES. THE EXPRESSION
LEOFORM 2 IS RESTRICTED TO HEART, SPLEEN AND KIDNEY.

11 - FUNCTION: RECEPTOR INVOLVED IN THE COSTINULATORY SIGNAL ESSENTIAL FOR T LYWHOCYTE PROLIFERATION AND INTERLEUKIN 2 PRODUCTION, BY BINDING CD28 OR CTLA-4. MAY PLAY A CRITICAL ROLE IN THE EARLY EVENTS OF T CELL ACTIVATION AND COSTINULATION OF MAIVE T CELLS, SUCH AS DECIDING BETWEEN IMMUNITY AND ANERGY THAT IS MADE BY T CELLS WITHIN 24 HOURS AFTER ACTIVATION.

1-1 SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

FUNCTION: LIGAND FOR THE T-CELL-SPECIFIC CELL SURFACE RECEPTOR ICOS. ACTS AS A COSTIMULATORY SIGNAL FOR T-CELL PROLIFERATION AND CYTOKINE SECRETION; INDUCES ALSO B-CELL PROLIFERATION AND DIFFERENTIATION INTO PLASMA CELLS. COULD PLAY AN IMPORTANT ROLE IN MEDIATING LOCAL TISSUE RESPONSES TO INFLAMMATORY CONDITIONS, AS WELL AS IN MODULATING THE SECONDARY IMMUNE RASPONSE BY COSTIMULATING HEMORY T-CELL FUNCTION (BY SIMILARITY).

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN (BY SIMILARITY).

ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; 1 (SHOWN HERE) AND 2;

J. Biol. Chem. 275:19139-19145(2000).
-!- FUNCTION: MAY PLAY A ROLE IN THE PROCESSES OF LYMPHOCYTE HOMING SECONDARY LYMPHOID ORGANS.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN (POTENTIAL).
-!- TISSUE SPECIFICITY: PROMINENTLY EXPRESSED ON HIGH ENDOTHELIAL VENULES BUT IS ALSO PRESENT ON THE ENDOTHELIA OF OTHER VESSELS.
LOCALIZED TO THE INTERCELLULAR BOUNDARIES OF HIGH ENDOTHELIAL
